RESEARCH INTERESTS

My research uses experimental methods to examine how financial information is produced and used, focusing on the decisions of financial statement preparers and users. My work has implications for standard setting, financial disclosure, and financial education.

WORKING PAPERS

[1] **Estimating Exit Prices: Managerial Bias in Entity-Specific and Fair Value Estimates**
(Job Market Paper; solo-authored)

Abstract: Fair value measurement requires managers to estimate exit prices from the perspective of an outside market participant, which is often assumed to constrain managerial bias relative to estimates made from the firm's own perspective. Across two experiments, I find that this assumption holds only when market-based inputs are strong, meaning they can be used without substantial adjustment or inference. As inputs weaken, managers rely more on their own assumptions, and fair value leaves bias intact or amplifies it. These findings show that the effectiveness of a measurement basis depends on the strength of inputs available to managers, a property the fair value hierarchy does not fully capture.
